Contact us for our full certification process or a preliminary gap assessment of your current management system.

The LiberoAssurance certification mark
The certification mark from LiberoAssurance demonstrates your compliance towards continuous excellence. The prestige of the LiberoAssurance certification mark also indicates that your systems and processes have been evaluated by one of the most recognized names in quality and compliance.

Certification in 5 steps
1. Complete an application and we customize a quote detailing the cost, planning, and time required. Our pre-audit team determines if your organization fulfills the management system requirements.
2. LiberoAssurance auditors visit your site (stage 1) to verify the profile submitted during your application and determine your readiness for the next step (stage 2).
3. Stage 2 Audit is carried out at your company’s site by members of our audit team.
4. Propose and implement corrective actions, if any.
5. Receive your audit report and certificate after approval from the committee with annual surveillance audits conducted thereafter.
ISO Management System Certification

LiberoAssurance offers a large range of certification and audit services in the fields of Quality, Health & Safety, Environment and Security. With these services, all clients of LiberoAssurance commit to ongoing processes aimed at improving their business performance and demonstrating their value while gaining competitive advantage.

LiberoAssurance offers certification of the following standards:

ISO 9001
ISO 9001 is one of the standards within the range of ISO 9000 standards and is used for the purpose of conformity assessment. ISO 9001 also serves as the basis for many other important sector-specific standards, such as OHSAS 18001 and ISO 14001. ISO 9001 certification is suitable for all sizes and types of organizations and is well established around the world in over 170 countries. The goal of ISO 9001 is to ensure that your business maintains a reliable standard of quality regarding goods and services so that your employees and customers are constantly satisfied.

ISO 14001
ISO 14001 is an international standard which recognizes the actions of responsible businesses in managing and controlling their environment. ISO 14001 Certification provides evidence that an Environmental Management System (EMS) is in place. It is designed to help businesses remain commercially successful without overlooking environmental responsibilities and impacts. It can also help you to grow your business sustainably while reducing the environmental impact of this growth.

ISO 22000
The food standard ISO 22000 is the only comprehensive and internationally recognized standard for management systems in the food industry. It is a complete certification scheme based on ISO 22000, the global food safety management system standard, combined with one or more specific technical specifications for PRPs (e.g., PAS 220/ISO 22002-1 or PAS 223) and additional Global Food Safety Initiative (GFSI) requirements. FSSC 22000 has been given full recognition by the GFSI and is the quality standard for companies along the entire production chain - from the primary producer through the transport company to the retailer specifying the requirements for a food safety management system that an organization must fulfill to demonstrate its ability to consistently produce food products which are safe for end consumers. Development of a structure following ISO 9001 and compliance with the HACCP guidelines are a prerequisite - hazard analysis, identification of critical control points (CCPs), monitoring of CCPs, development of corrective measures, archiving, and verification.

ISO 50001
The ISO 50001 energy management standard is a proven framework for industrial facilities, commercial facilities, or entire organizations to manage and reduce their energy consumption, including all aspects of energy procurement and use. An energy management system establishes the structure and discipline to implement technical and management strategies that significantly cut energy costs and greenhouse gas emissions—and sustain those savings over time. Savings can come from no- to low-cost operational improvements.

ISO/IEC 27001
ISO/IEC 27001 is the leading international standard for information security management. It covers commercial, governmental and not-for-profit organizations, and specifies the requirements for establishing, implementing, monitoring and improving an information security management system (ISMS). It includes people, processes and IT systems by applying a risk management process. It can help small, medium and large businesses in any sector keep information assets secure. It is extremely beneficial to any company who manages information and has to demonstrate how securely this information is handled, managed and distributed.

OHSAS 18001
OHSAS 18001/ISO 45001 is the internationally recognized assessment specification for occupational health and safety management systems. It enables organizations to manage operational risks and improve their performance. It also provides guidance on how to manage the health and safety aspects of business activities more effectively by taking into careful consideration accident prevention, risk reduction and well-being of the employees. An organization’s conformance to OHSAS 18001/ISO 45001 safeguards employees, clients and all parties in question from as few risks as possible, while third-party certification authenticates that an organization has taken steps to avoid accidents and hazardous situations using a comprehensive and effectively implemented system.
E Learning by LiberoAssurance
Also more popularly known as Computer Assisted Instruction or Tutorials, “Computer Based Training” is a process of learning that is not executed in the traditional manner one experiences in an educational environment/classroom. **E Learning is the future of training.**

For the trainee some of the benefits are:
- Training using the computer on board, in office or at home.
- Low cost with better courses continuously updated
- Students who are quick learners can forge ahead at a pace that average students would not be able to handle.
- For those who take a little more time than the average student to process and learn new information, computer based training is ideal, as they can proceed at their own stride.
- Courses are available online and are all updated following the new requirements
- Good level of accountability.

The Steps:
- Visit [www.liberoassurance.org](http://www.liberoassurance.org) and choose E-Learning from top menu.
- Jump to e-shop where you can see the courses available and Read the details for each course
- Choose the courses you want to participate
- Pay using your credit card or pay pal
- Enjoy the seminar
- Participate the exam - 3 attempts – multiple choice exam
- Organisations who will need our E-learning Platform may choose face recognition for further verification.
- Receive on-line your certificate to update your LinkedIn profile with just one click
- Receive the original certificate via mail at the declared address.

DO NOT FORGET
LIBEROASSURANCE IS:
- Approved by HELLENIC ADMINISTRATION as “Continuous Professional Development Training Centre Level 2”
- Accredited Certification body by ESYD Certificate Number 1033
